## Selection of global news events

January 2, 2023 Brazilian President Lula takes office.

Jan. 3, 2023 Benjamin Netanyahu is sworn in as Israeli prime minister for the sixth time.

Jan. 5, 2023 Peruvians demand resignation of interim President Dina Boluarte.

Jan. 7, 2023 Republican Kevin McCarthy is not elected speaker of the U.S. Congress until the 15th ballot.

elected. That many ballots had not been required in over 100 years.

January 10, 2023 Deaths in riots in Peru.

January 11, 2023 In Thuringia, the Green Party changes a minister - because of gender proportionality.

Doreen Denstädt is nominated as the new Minister of Justice and Migration. Defense Minister Christine Lambrecht resigns after numerous shortcomings.

A state of emergency is again declared in Lima and other Peruvian regions.

Storms and floods in California.

January 17, 2023 Boris Pistorius becomes new German defense minister.

Jan. 18, 2023

Ukrainian interior minister and deputy killed in helicopter crash

January 20, 2023 Millions of people protest in France against the government's planned

## **Selection of global news events**

government's plan to raise the retirement age to 64.

Demonstrations continue in Peru

Jan. 23, 2023 Erdogan moves up election date to May 14

January 26, 2023 Palestinian stabs two people on a regional train from Kiel to Hamburg

and injures five others.

Machete attack in two churches in Algeciras, Spain, with at least one dead.

January 30, 2023 Pakistan: Islamist suicide bomber kills 27 people.

Petr Pavel is elected fourth president of the Czech Republic

February 1, 2023 Wave of purges in Ukraine, house searches and dismissals of government members

suspected of corruption

USA moves ammunition depot from Israel to Ukraine

New wave of protests in France against planned pension reform

Great Britain: wave of strikes due to economic crisis

February 6, 2023 Major earthquake in Turkey and Syria of magnitude 7.8 - more than 50,000 deaths.

The US Air Force shoots down a Chinese weather balloon over the USA

## **Upcoming significant events**

February 25 Parliamentary and presidential election in Nigeria

March 5 Parliamentary election in Estonia
April 2 Parliamentary election in Finland

By April 15 Germany will completely phase out nuclear power generation,

the last three nuclear power plants, Isar 2, Emsland, Neckarwestheim 2

are to be shut down - this has since been called into question

May 6. Coronation of King Charles III at Westminster Abbey

May 14, Parliamentary election in Bremen

Parliamentary election in Turkey

October 8, State elections in Bavaria

Chamber election in Luxembourg

## Potential risks to look out for

Dangers of (World) war

Energy Blackout

Disruptive technologies

Target balances

•EU becoming a transfer union

Banking crisis

Reduction of quantitative easing

•Italian sovereign debt crisis

•EU bad debts of above 300 B

Greek sovereign debt crisis

Brexit

Refugee crisis

•Costs of German energy transition

Chinese debt crisis

•South American crisis, Venezuela,

Mexico

Cash ban, special taxes

Natural desasters (Earthquakes)

•Black Swan events (monster waves)

•War risks (Iran)

Turkey (instability, currency crisis)

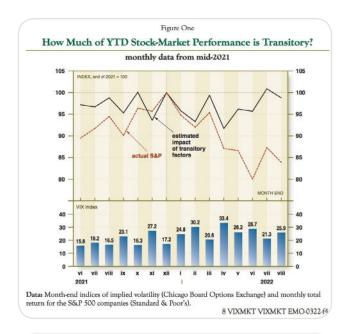

# **Equity-Market Outlook**

# To buy or not to buy into a stock-market setback

by HCWE & Co, R. David Ranson

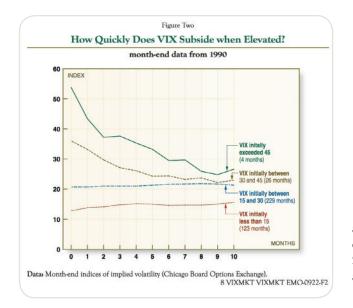

ne of the oldest rules for equity investing is to "buy on the dips." This, of course, is at odds with the random walk model that was a sideproduct of efficient-markets theory and the Capital Asset Pricing Model, now established doctrine. One of the earliest statements of that model was by Nobelist Paul Samuelson in 1965.¹ Nevertheless, investors frequently do buy on the dips - though always nervously, since of course it doesn't work every time. It is a particularly engaging issue at present, with the S&P returning minus 16 percent year-to-date through August.²

Investors ask themselves how much of the market's year-to-date loss is transitory (i.e., subject to a rebound), and how much will be sustained. For many this is essentially a guess, but recent HCWE research suggests a simple way to provide a market-based answer to this question using financial-price information.<sup>3</sup> It derives from a close inverse correlation between monthly movements in the S&P and monthly changes in the VIX index of implied market volatility.<sup>4</sup> It's a relationship that makes sense if we interpret VIX broadly as a measure of general macroeconomic uncertainty. And the VIX, of course, is

VIX is an indicator of shortterm upside potential during an S&P setback. But it is a better guide to staying out of the market than to buying back in. That would have come in handy this year.

norm-reverting. It's a fact of human psychology that a state of high anxiety cannot last long. That implies the existence of a systematically norm-reverting component in the stock market's behavior - one which is, by definition, transitory. In other words, there's substantial upside in the market when VIX is highly elevated - and little or none otherwise.

The most recent data explain the failure of buy-on the-dip strategies this year. In Figure One, the market's year-to-date loss is represented by the red line in the chart. The fraction of that loss that can be explained by VIX is represented by the black line. That is the transitory component, and in recent months it's been very small: not be a good time to hope for a rebound. The purpose of this report is to check the extent to which such an approach would have helped investors capture the market's upside historically. It uses the histories of the S&P and VIX to see whether an investor would have benefited from using VIX to distinguish between transitory and sustained components of stockmarket reversals.

#### VIX AS A PREDICTOR OF STOCK-MARKET REBOUNDS.

After a market setback like that of 2022, the temptation to buy back into the market is strong, but it will be profitable only to the extent that the decline is transitory. This boils down to buying when the VIX index is above some target

# **Equity-Market Outlook**

1. Paul A. Samuelson, "Proof that Properly Anticipated Prices Fluctuate Randomly," Industrial Management Review, Spring 1965.

2. For an account of the failure of the strat- egy so far in 2022, see Gunjan Banerji, "Buying the Stock-Market Dip is Backfir- ing. Investors Keep Piling In Anyway," Wall Street Journal, September 25, 2022.

and staying out when VIX is below. A 2003 HCWE report ex-plored the relationship between movements in VIX and S&P performance. It confirmed that a high level of VIX, although a somewhat bearish signal for the longer term, is "bullish for the nearterm future of the stock market."<sup>5</sup>

The profitability of VIX-directed investment decisions depends in part on how quickly VIX comes back down when it has been elevated. This is investigated in Figure Two, in which the history of monthly changes in VIX is classified by size, and its average subsequent evolution is tracked over a ten-month period. The chart shows that VIX does fall rapidly when it is initially above 30 or so. And there is norm reversion from below as well. When initially below 15, VIX slowly rises; but between 15 and 30 there is not much there. Using the same VIX categories, Figure Three shows the immediate consequences of this norm reversion for S&P performance.

The calculations show the bulk of the benefit showing up within two months; beyond that time systematic differences in performance for different initial VIX levels disappear. This sug- gests that VIX-directed buying would therefore be only a short-term strategy. And as in the previous illustration, there is not much to gain unless VIX is initially above 30 or so. Thus the scope of the strategy is limited to exploiting

a relatively small number of opportunities when they come along. Perhaps its greatest value would be in protecting against the mistake of buying on the dips in situations like the present, where the VIX index is not high enough to justify action. When opportunities do arise, they can sometimes be extremely profitable. Table 1 illustrates what happened following the occasions on which VIX reached a major peak. Five separate episodes with the most extreme peaks are listed, together with the market's subsequent performance over three and six months. These data show that an extremely high VIX can be a forerunner of high returns, but it is by no means a quarantee.

#### INVESTMENT CONCLUSIONS.

Some stockmarket setbacks are transitory and folowed by strong rebounds. Others are not. And many are partly transitory and partly sustained. There is a way to distinguish differ- ent situations. VIX is an indicator that detects situations where stock prices have fallen due to a surge in uncertainty - and may be temporarily depressed. In effect, it signals the market's collective opinion about its own resilience. Of course, it is not infallible. The more dramatically VIX is el- evated the greater is the scope for a re- bound. Empirical testing confirms that if VIX is not greatly elevated, it's a sign that most of the market's decline will be sustained. Perhaps the best use of VIX in gauging the market is to recognize situations where a rebound is unlikely. At the end of August the VIX stood at 25.9. So the present situation falls into that category.

## **ANNUAL CO2 EMISSIONS**

# Who emits the most CO<sub>2</sub>?

Asia 19 billion tonnes CO <sub>2</sub> 53% global emissions					North America 6.5 billion tonnes CO <sub>2</sub> 18% global emissions		Europe 6.1 billion tonnes CO 17% global emissions	
China 9.8 billion tonnes CO, 27% global emissions				India 2.5 bilion tonnes 5.8%	USA 5.3 billion to 15% global	onnes CO.	EU-28 3.5 billion tonnes CO <sub>2</sub> 9.8% global emissions	
							Russiä 1.7 billon tonnes 4.7%	
	Saudi Arabia	Thailand	UAE 230M toppes	Pakistan	Canada 573M tonnes	Mexico 490M tonnes		
1.2 billion tonnes	Saudi Arabia 635 milion tonnes 1.8%	331M tonnes 0.9%	UAE 232M tonnes 0.6% Vietnam 199M tonnes	199M tonnes 0.55% Iraq 194M tonnes	573M tonnes 1.6%	490M tonnes 490M tonnes 1.4%		Ukraine 212M lemnes 0.6% Belanus (61M)
Japan 1.2 billion tonnes 3.3%	635 million tonnes 1.8% South Korea 616 million tonnes	331M tonnes	232M tonnes 0.6% Vietnam 199M tonnes 0.55%	199M tonnes 0.55% Iraq	573M tonnes 1.6% South Africa	490M tonnes 490M tonnes 1.4%	Australia atata t 1,1% 8,8hir 1,5% 1,55 b	
1.2 billion tonnes	635 million tonnes 1.8% South Korea	331M tonnes 0.9% Kazakhstan 293M tonnes	Vietnam 199M tonnes 0.5% Qatar	199M tonnes 0.55% Iraq 194M tonnes 0.54%	South Africal 456M tonnes	490M tonnes 1.4%	Australia Internation 8 ship 1.7% 1.55 b. 3.2%	Bearus (CTM)

Shown are national production-based emissions in 2017, Production-based emissions measure CO<sub>2</sub> produced domestically from fossil fuel combustion and cement, and do not adjust for emissions embedded in trade (i.e. consumption-based).

Figures for the 28 countries in the European Union have been grouped as the 'EU-28' since international targets and negotiations are typically set as a collaborative target between EU countries. Values may not sum to 100% due to rounding.

1.3 billion tonnes CO,

## **Macroeconomic global SWOT analysis**

**SWOT: Strengths, Weaknesses, Opportunities, Threats** 

#### - Weaknesses

- Strengths
Technological progress (artificial intelligence, robots,
energy storage, alternative energies,

pharmaceuticals,
3D printers)Internet - faster global
exchange of knowledge, acceleration
of technological progress
Theoretical models for a meaningful
social and economic structure are
available (liberalism, capitalism) only
need to be implemented.

#### - Threats

Volcanic eruptions, earthquakes, other natural disasters, Wars / Civil Wars
Protectionism, tariffs, restriction of international trade
Credit defaults (China, banks, Italy...) with rising interest rates
Decay of the Euro with corresponding turbulences
Uncontrollable migration of peoples
«Black Swans» in general

High government and private sector debt Interventionist states (welfare state, overregulation, redistribution, basic socialist ideas), increasing interventionism, e.g. in Germany

Necessary reforms in many countries are not taking place (e.g. Southern Europe)

Lack of integration of foreigners in Europe (Germany, France...) with corresponding risks of social unrest Pension systems often underfunded

#### - Opportunities

Peace (dividend) Korea, Iran, Syria, Ukraine, Africa
Problems of energy storage
technology are solved
Economic growth,
rising corporate profits
Opportunities of globalization
Liberalism / Capitalism (if ideology were to
become more widespread), the result would be a
major increase in international prosperity in the long term

Up until now, the world has recovered again and again even after very major crises and in the long term, share prices, for example, have always risen. Gold has maintained its value over time. From the investor's perspective, this means that one should buy after a major price slump and view the low prices then available as an entry opportunity. In order to have capital to get in at this time, you should never be over-invested even if you are currently extremely positive about the future. And one should also see the chances of speculating for falling prices at the right time or hedging oneself with hedge positions.

"If wars can be started by lies, they can be stopped by truth." Julian Assange

"The only freedom which deserves the name, is that of pursuing our own good in our own way, so long as we do not attempt to deprive others of theirs, or impede their efforts to obtain it."

John Stuart Mill, On Liberty

"I know not what others may choose but, as for me, give me liberty or give me death. I know of no way of judging the future but by the past. For my part, whatever anguish of spirit it may cost, I am willing to know the whole truth, to know the worst and provide for it."

Patrick Henry (1736-1799)
